

CYIENT

Integrated site specific farming solution by CYIENT

Murali Ayyagari
Srikanth Ponapala

If the farmer is poor then so is
the whole country — Polish Proverb

• We are in the midst of agrarian crisis

Every **32 minutes**, one farmer family is losing the head of household

Unfavourable weather

Water crisis

Higher
Input costs

Debt

Labour
scarcity

Small
holdings

Seed
quality

Per acre
yield

Low
mechanization

Over/under
usage of
chemicals

Losing land to
urbanization

300,00 farmer suicides were reported since 1995 in India

Indian agriculture is consuming **lower nutrient usage(106kg/ha)** below the world average leading to malnutrition of the fields

Lower literacy rates in farmer community is hindering in gaining the fruits from technology advancements

Lower yield levels compared to the other major agriculture producing countries

Limited **access to the retail** markets

Climate is getting better for agriculture

There is a greater demand for food in coming 30 years

New irrigation projects

Technology driven solutions

Positive
policy
changes

Crop
insurance

Digitization

Increasing
collective
farming

Organic
farming

Corporate
investment

Advanced
mechanization
availability

Drones

Soil health
cards

Governments **covering the input costs**

Ease of securing the **bank loans** and credits

Free or **subsidized electricity**

Construction of roads helping to **connect the last mile**

Integrated schemes for **agriculture marketing**

Start-ups getting into many areas of Agri-business bringing innovation on to the table

Who we are

CYIENT founded in 1991, provides engineering, manufacturing, geospatial, network, and operations management services to global industry leaders.

Cyient's technical expertise, domain knowledge, and service offerings differentiate us as a Design, Build, Operate & Maintain Partner who can fulfill greater needs and solve more problems. We leverage the power of digital technology to offer complete solutions across our clients' value chains.

KEY SERVICES	Product Engineering					Process Engineering		Networks & Operations		Design Led Manufacturing		Geospatial	
	Digital												
INDUSTRIES SERVED													
	Aerospace & Defense		Communications	Energy	Geospatial	Industrial	Medtech & Healthcare	Mining	Rail	Semiconductor	Utilities		
FACTS & FIGURES	\$538 M Revenue*			\$72 M Operating Profit*			~ 14,000 Employees						
MARKET PRESENCE	North America				Europe, Middle East, Africa				Asia-Pacific				

Aerospace & Defense	Boeing	Diehl Aerospace	ELTA Systems	Honeywell	Pratt & Whitney	Rafael	UTC
Communications	Airtel	AT&T	BT	Cox	Swisscom	Telenet	Telstra
Energy & Mining	IHS	Rio Tinto	Siemens	SMEC	Transocean	Westinghouse	
Geospatial	Ordnance Survey	Rural Payments Agency	TomTom	U.S. Department of Transportation			
Industrial	Caterpillar	ESCO	John Deere	Joy Global	Komatsu	Terex	
Medtech & Healthcare	GE Healthcare	Medtronic	Ortho Clinical	Philips	Siemens	Thermo Fisher Scientific	Vios Medical
Rail Transportation	Alstom	Bombardier	PTA (Western Australia)	Siemens	Thales		
Semiconductor	AMD	Bosch	Broadcom	GlobalFoundries	MediaTek	NVIDIA	Qualcomm
Utilities	AusNet Edison	Xcel Energy	Pacific Gas and Electric Company	Singapore Power	Southern California Edison		

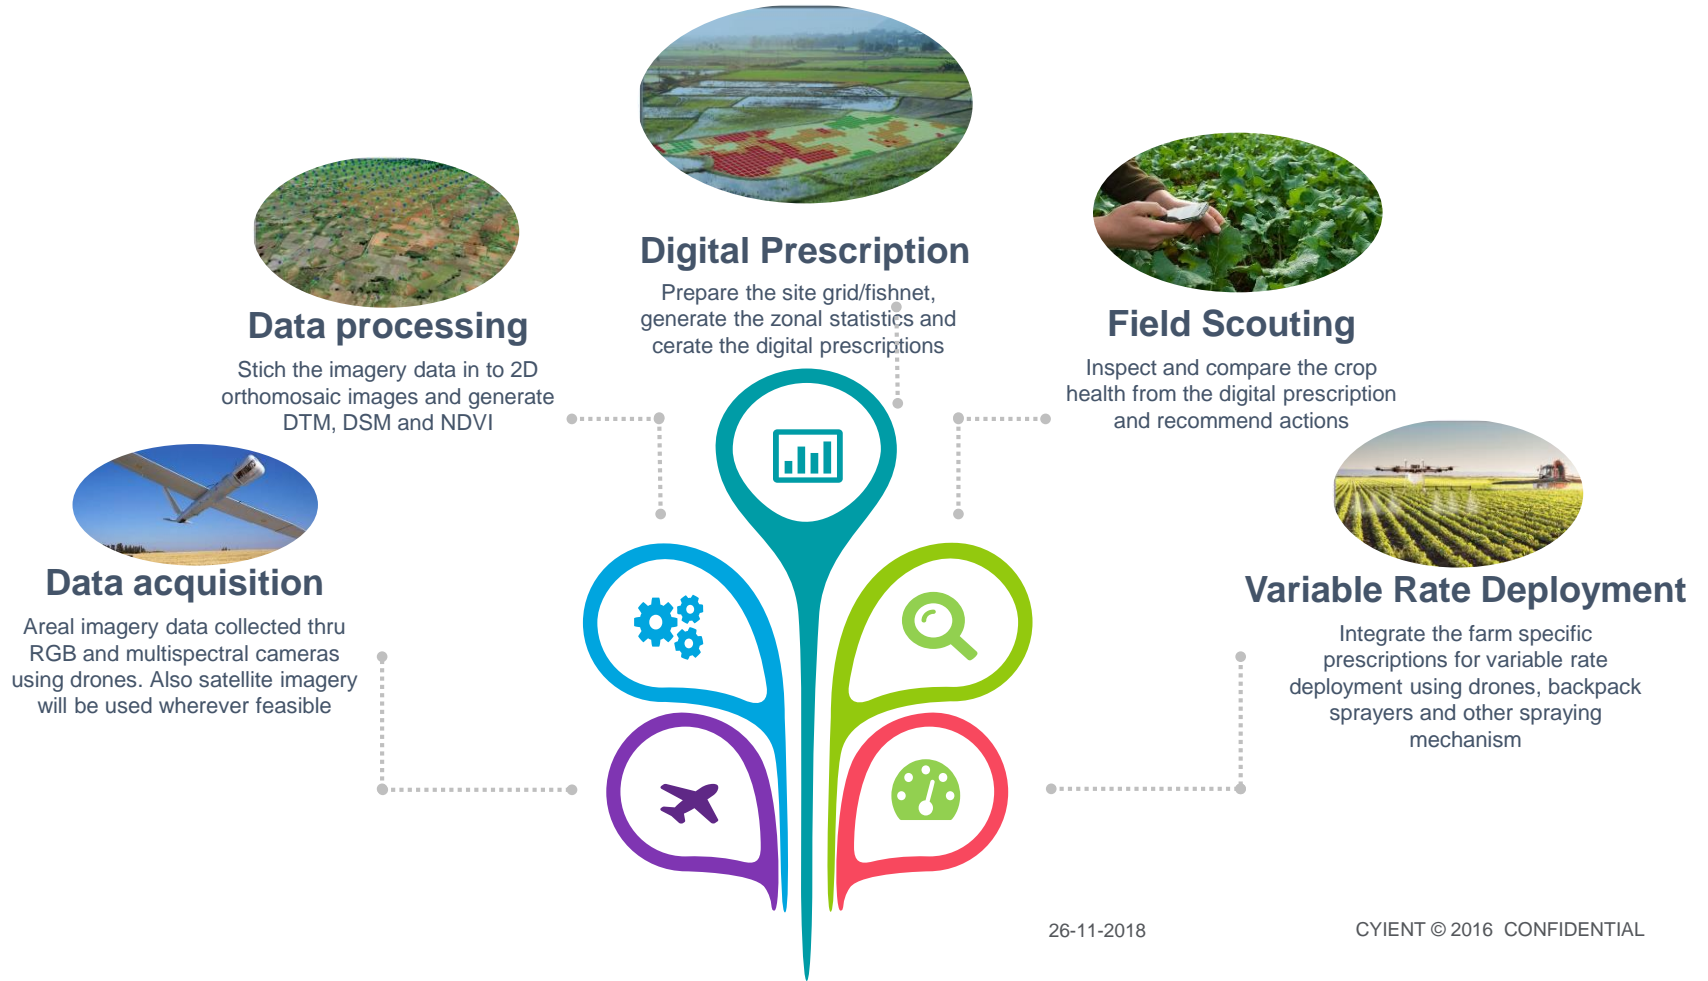

• Integrated solution for site specific farming •

CYIENT in collaboration with a major AgChem company working on development of an “Integrated Site-Specific Farming Solution using the Precision Agriculture methodology” for farmers and other key stakeholders involved in the agriculture industry to leverage the benefits of technological advancements for early detection of crop health, possible yield restrictions, minimizing under/over-application of chemicals, sensible yield predictions and optimizing the resources.

Execution of the real world Proof Of Concept is in progress to evaluate the technical feasibility and economic viability of the such an integrated solution.

The outcome of the POC shall help to understand the key benefits to the farmers, business opportunities, implementation limitations, needed investments, market worthiness, scalability and potential risks for architecting the organizational strategy.

• Solution model

Farmer Centric

Major challenges faced by farmers

Approach to solve by the solution

Scarcity of water resulting in to reduction in food production

Provide the knowledge of field topography, texture, moisture, weather and crop growth for selective watering. More crop for drop..

Shortage of labor during peak seasons due to migration in to other high paying trades, moving to towns/cities etc.

Increasing efficiency thru variable rate application, drone based chemical spraying, effective weed controlling are some of the areas addressed

Over/under usage of nutrients and crop protection agents

Farmer specific prescriptions to accurately deploy the chemicals

Not taking educated decisions basing on weather conditions, rain fall and crop suitability

Local, trusted advisor support thru field agents and agronomists

Key findings to help the farmer

Soil Fertility Map

Supply the PH value, salinity, slope and nutrient status information which helps in customizing the application of nutrients and target spraying

Stress Areas

Stress areas related to moisture, nutrients, crop diseases etc. to help early detection .

Terrain Info

DTM and DSM datasets will help making the decisions on land leveling and irrigation layout planning

Yield Mapping

Yield maps provide the assessment of yield vary within the field which will help making sensible management decisions

Plant Height

Plant height calculated from terrain info help in growth assessment

Irrigation

Provide the different rates of irrigation required for every part of the field based on water stress index taken from aerial imagery

Weed Patches

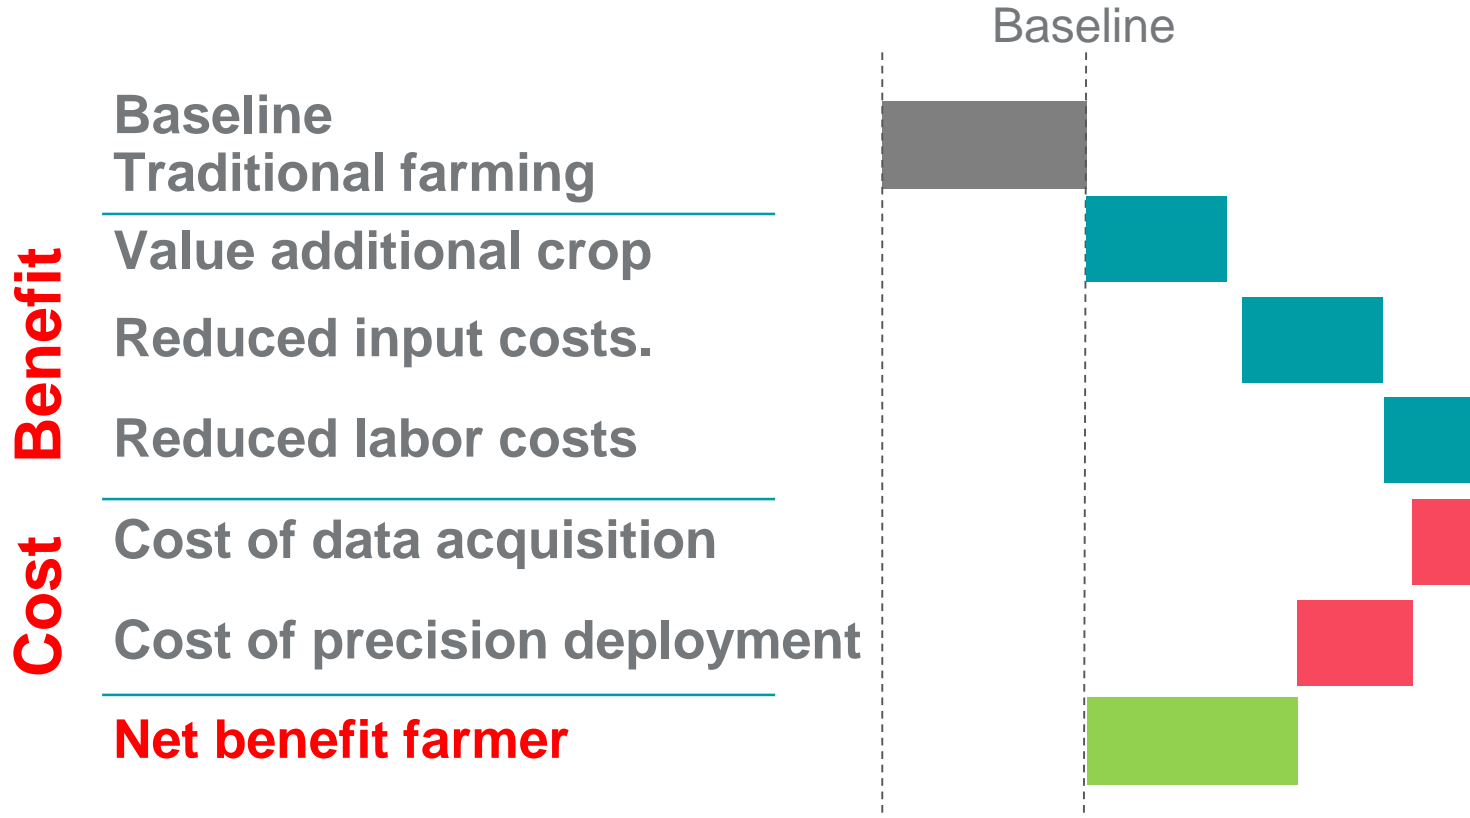

Vegetation index from drone imagery helps in identifying the presence of weed patches in between the inter row area helps planning for herbicide application.

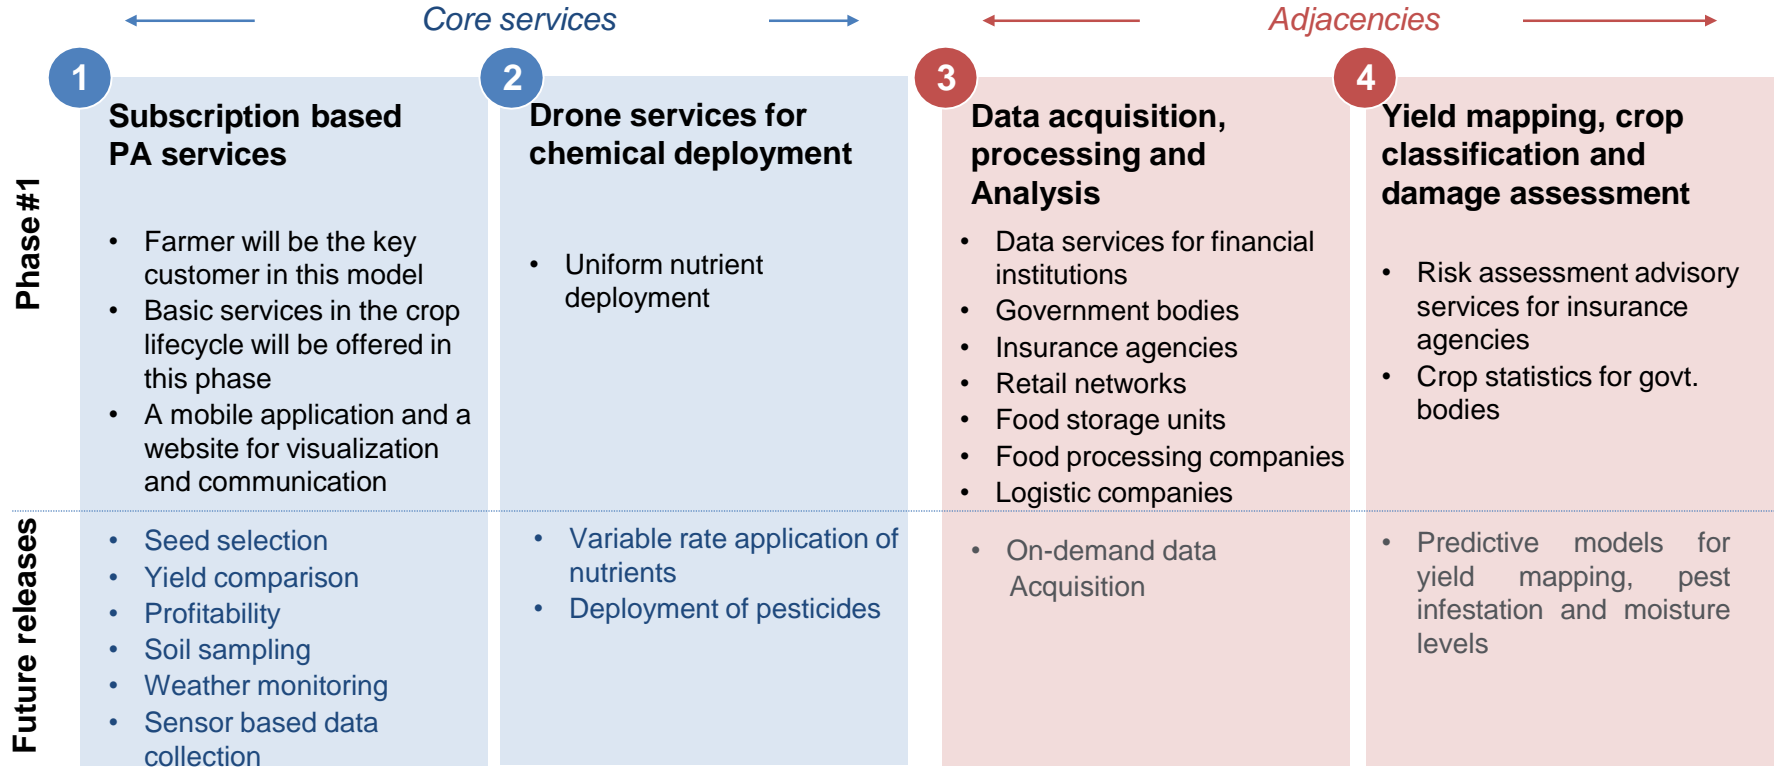

Weather information

Meteorological information gathered from multiple sources would help developing the irrigation schedules and crop selection and sowing and harvesting decisions

• Where is the economic benefit for farmer

Revenue streams

SWOT analysis

Strengths

1. Farmer reach
2. AgChem expertise
3. Geospatial experience
4. Data analytics
5. Software development
6. IoT platform
7. Drone/UAV collaboration
8. Design led manufacturing
9. Institutional support

Opportunities

1. ~390 Mn acres of land to explore
2. Huge demand for supply of produce
3. Growth in usage of secondary and micro nutrients
3. Growth in organic farming
4. Growth in drone based services

Weaknesses

1. Limited access across pan India
2. History data unavailability
3. No/limited Influence on policy making

Threats

1. Farmer buy-in for subscription
2. Restrictions on UAV/Drone flying
3. Government policy changes
4. Scaling up to the larger size
5. Higher data acquisition costs per serving land
6. Availability of internet in remote areas
7. Collaboration/partnership related challenges

• Short and long term benefits

Short term benefits

- Site specific information improves ability to diagnose crop production problems
- Yield restrictions caused by drainage, soil type, diseases, weeds can be identified & corrected
- Prevention of over-application of inputs
- Promotes good land stewardship

Short term benefits

- Evaluation of Management Practices
- Comparison of Yield Variations over the periods
- Evaluation of Crop Inputs, New Products
- Tracks Trends & Identifies Problems
- Changes in crop rotation & varieties
- Efficient Equipment Use
- Increases Field Efficiency
- Reduces overlaps & missed applications
- Increased Machinery Utilization rate
- Uses soil characteristics & weather to improve scheduling of operations
- Reduces Risk
- Reduces Variability in Net Returns

Looking forward

The collaboration of CYIENT and its AgChem partner epitomizes our shared values of “social responsibility, growth through innovation and technology empowering the rural India” backed up by combined strengths of “AgChem and Technology” is looking forward to launch the integrated site specific farming solution to enhance the productivity, sustainable agriculture and instrumental in reducing the environmental pollution...

Murali Krishna Ayyagari PMP

Head - Precision Agriculture @ CYIENT

Murali Ayyagari

About Murali

Over 20 years of experience in managing the delivery of global software projects/programs across diversified domains and technologies supporting fortune 500 customers.

Areas of expertise

Growing and sustaining high-performance teams | Leadership building| Partnership building| Initiate/manage cross-functional teams and multi-disciplinary projects | Program/Project Planning | Customer liasoning | Pre-sales support | P&L ownership | Vendor management | Technical Architecture | Software development & Testing | Precision Agriculture

Srikanth Ponapala

Subject Matter Expert- Precision Agriculture @ CYIENT

Srikanth Ponapala

About Srikanth

A post graduate in agriculture with 15 years of experience in GIS & Remote sensing technologies in the agriculture and other allied areas. Currently associated with Cyient Limited as Subject Matter Expert for Agriculture and managing Agriculture relevant projects within New Business Accelerator (NBA) Program.

Areas of expertise

Agriculture | Geospatial | Field survey| Proposals | Project reports | Customer liasoning | Pre-sales support | Client presentations | Project planning and execution | Team management |
